

## 掃描輸入套件：Scanner

導入套件與宣告語法如下：

- 套件名稱：java.util.Scanner;
- 物件宣告產生：Scanner in = new Scanner(System.in);

```
import java.util.Scanner;
public class Ex2_4 {
    public static void main(String args[]) {
        Scanner keyin = new Scanner(System.in);
        System.out.printf("請輸入客戶資料 =>");
        String name = keyin.next();
        int age = keyin.nextInt();
        float cost = keyin.nextFloat();
        .....
    }
}
```

Scanner 類別的輸入方法：(物件名稱為 keyin)

輸入方法	功能敘述
keyin.nextLine()	讀入一行字串(包含換行)
keyin.next()	讀入一個字串
keyin.nextInt()	讀入一個整數
keyin.nextFloat()	讀入一個浮點數
keyin.nextDouble()	讀入一個雙倍浮點數
keyin.useDelimiter(“;”)	設定分隔符號，如分號(;) )
